See the big picture with CanMap® Streetfiles. Locate, analyse and display customers, prospects and assets geographically. Enhance strategic decision-making, manage business decisions effectively, or offer value-added services with CanMap® Streetfiles.

North America's #1 choice for Canadian data provides an accurate map fabric for wireless and location based service applications (LBS), market analysis, target marketing, site location analysis, customer service and asset management.

This new release provides users with comprehensive coverage, detailed attribution, positional accuracy, current data, and presentation-quality cartographics.

CanMap Streetfiles' comprehensive nationwide coverage provides detailed topographic and geographic features at the highest level for all major Canadian Urban Areas.

"MapQuest.com relies on the best available data to provide web and wireless-based, destination information solutions. DMTI Spatial's mapping data and geocoding solutions provide the quality and depth we require to ensure that our services meet our customers' demands."

- MapQuest.com

Coverage:

- Nationwide

Currency:

- Quarterly, semi-annual, or annual maintenance available

Level of Accuracy:

- Ranges from National Topographic Data Base (NTDB) standard down to sub-metre

Projection:

- Unprojected latitude, longitude

Datum:

- NAD83

Format:

- Autodesk MapGuide, ESRI and MapInfo
- Custom formats available

Features Include:

- Over 1.5 million total kilometres across Canada
- Incorporation of entire CanMap Rail product with full attribution★
- Addition of Toronto underground walkway ("The Path")★
- Verification of over 40,000 building footprints across Canada's major urban centres

Benefits:

- Available with or without street addressing
- Locate resources or customer data with superior accuracy
- Display and analyze data on a nationwide standard
- Enhance applications with real world accuracy and detail
- Enable GPS solutions with CanMap Streetfiles
- Geo-reference aerial photography against CanMap Streetfiles
- Seamlessly nesting with DMTI Spatial's family of products
- Comprehensive user documentation
- Custom viewing files are provided to facilitate the use of CanMap Streetfiles by opening and intelligently layering various data themes for display, based on appropriate viewing scales
- Shipped in the world's leading GIS software formats

Special Bonus: Every order of CanMap comes with a FREE Canada Directory that includes Canada wide boundaries for Area Codes, Time Zones, Provinces, Regional Municipalities, and DMTI Spatial Urban Areas, in addition to a coarse water layer. This allows you to instantly understand where your geography falls within Canada.

CanMap Streetfiles can be purchased with or without addresses.

DMTI Spatial Maintenance Program

With CanMap Streetfiles, you have the option to purchase **quarterly, semi-annual or annual maintenance** to keep your GIS data current. Product improvement updates are conveniently shipped to you automatically.

Benefits to You:

- Ensures that you will always have the highest quality data
- Convenient, saves time and effort, costs less than paying to upgrade
- Addressing will continually be improved
- Three options available to suit your budget
- Special product and money saving offers for Maintenance Subscribers

Purchase Maintenance and Realize the Benefits!

* The production of digital map data is dependent on the availability of data from numerous sources. DMTI Spatial endeavours to provide coverage to the fullest extent possible where source data is available.
